

Private Training Courses

Get the most from your lubrication program

Private training is ideal for facilities with five or more employees who need certification preparation, have new team members to bring up to speed, or simply want to strengthen their team's lubrication and oil analysis knowledge.

Training That Works Around Your Operation

One of the biggest advantages of private training is flexibility. We work with your team to schedule training around your facility's normal operating hours and shift schedules. Delivering this material in a way that works for you is our top priority!

Private training also allows us to make the experience more relevant to your employees. Discussions can focus on the equipment, lubricants, sampling practices, oil analysis program, and reliability challenges your team encounters every day.

Certification & Exams

Certification doesn't have to be your end goal! Private courses are also an excellent option for onboarding new technicians, cross-training employees, refreshing an experienced team's knowledge, or creating a more consistent lubrication program across the organization.

For those that wish to proceed with certification, we work with STLE and ICML to coordinate onsite exam proctors at your facility.

**Exams may be included in your training quote upon request. We do not charge an additional markup for this service.*

Training has been proven to offer many benefits to employees, from feeling valued to increasing job mobility within the organization.

1-Day General Lubrication Concepts (GLC)

Designed to build foundational knowledge of lubrication, oil sampling, and oil analysis concepts. ICML's GLC certification is intended to help technical and non-technical team members develop the lubrication knowledge needed to better support maintenance and reliability programs.

1-Day Advanced Lubrication Concepts (ALC)

Builds upon foundational lubrication knowledge with more advanced concepts for individuals who need a deeper understanding of lubrication practices and their role in equipment reliability. Training prepares qualified participants for the ICML ALC certification exam.

2-Day Machinery Lubrication Technician I (MLT I)

Provides practical training in machinery lubrication practices and prepares qualified participants to sit for the ICML MLT I certification exam.

3-Day Comprehensive Oil Analysis (MLT I, MLA I, OMA)

A deeper dive into lubricant condition, contamination, wear debris, sampling, testing, data interpretation, and troubleshooting. This course can help prepare qualified participants for:

- ICML Machinery Lubricant Analyst I (MLA I)
- ICML Machinery Lubrication Technician I (MLT I)
- STLE Oil Monitoring Analyst (OMA).
